This well-established treatise is premised on the assumption that the key to understanding the principles of civil procedure is to know why: why the principles were created and why they are invoked. The treatise is written to answer these questions as it lays out the basic principles of civil procedure. It also reflects the authors' belief that students of civil procedure can understand and appreciate complex principles when they are clearly presented; teaching civil procedure does not require dumbing it down. The authors use the Federal Rules of Civil Procedure as a model, but they also refer to different state rules and doctrines where appropriate in order to present a representative cross-section of state models. Although they discuss important civil procedure cases in the text, thus supporting the most widely used civil procedure casebooks using these same cases, they also provide useful references to secondary sources and illustrative cases for the reader who wants to explore further.

Mountaineers, Rock Climbers, and Science Educators Around the 1920s, rock climbing separated from mountaineering to become a separate sport. At that time European climbers developed new equipment and techniques, enabling them to ascend mountain faces and to climb rocks, which were considered unassailable up to that time. American climbers went further by expanding and improving on the equipment. They even developed a system of quantification where points were given for the degree of difficulty of an ascent. This system focused primarily on the pitch of the mountain, and it even calculated up to de- mals to give a high degree of quantification. Rock climbing became a technical system. Csikszentmihaly (1976) observed that the sole interest of rock climbers at that time was to climb the rock. Rock climbers were known to reach the top and not even glance around at the scenery. The focus was on reaching the top of the rock. In contrast, mountaineers saw the whole mountain as a single "unit of perc- tion." "The ascent (to them) is a gestalt including the aesthetic, historical, personal and physical sensations" (Csikszentmihaly, 1976, p. 486). This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people. Interestingly, in the US, Europe, and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists, while the mountaineers were a more varied lot.

Virtually all scholars acknowledge the presence of opponents in 1 and 2 Timothy, but there is considerable disagreement over the identity of these opponents and the author's way of handling them. In this volume, Thornton provides a critique of a number of extant theories, including "Gnostic," Jewish, and proto-Montanist identifications, and develops a rigorous methodology for unmasking the opponents who appear in these letters. He argues that the opponents came from within the Christian community in Ephesus and that their teaching is best described as an erroneous eschatological position that derived from the complexity of Paul's views. He also argues that the author of the books of Timothy engaged with the false teachers in significant ways throughout the letters, and draws attention to a number of literary and theological maneuvers that were intended to counteract the opponents' influence and/or to bolster the faithful community's confidence as it struggled against the opponents. Thornton's

This book makes a major contribution to Japanese literary and cultural studies.

Wildlife forensics is the application of forensic science to the conservation and protection of non-domesticated animals, both in the wild and in captivity. Providing an in-depth introduction to this rapidly evolving field, *Wildlife Forensic Investigation: Principles and Practice* also chronicles aspects of the history of management, conservation, and environmental protection, with an emphasis on their global importance in the twenty-first century. The book examines the crucial role of wildlife forensic investigation with regard to live animals, dead animals and samples and covers national, regional, and international legislation. While the text particularly focuses on forensic science as it relates to wild animals, it also includes mention of plants and habitats because of their relevance to conservation. The book discusses animal welfare as well as the damage that can be inflicted on humans and property by wildlife. Offering access to sound evidence based on good science and obtained using the best available practices, the book is enhanced by case studies from experts who describe some of their own work. This resource is essential for those involved in a range of endeavours, including investigating wildlife crime, identifying animal remains, ascertaining the circumstances of death of wild species, and other legal proceedings and activities concerning wildlife. The forensic skills described in this book can be applied to a wide range of activities (not necessarily involving the legal process), including environmental impact assessments, insurance claims, governmental and other enquiries, checking of trading standards and the inspection of (for instance) pet-shops, animal boarding establishments, and zoological collections. The authors point out that one of the most important requirements of those persons involved in wildlife forensic work is to retain an open mind. Such personnel should also be conscious of new developments and evolving techniques and be able to anticipate situations where their investigative and scientific skills might be used to advantage—so-called "horizon scanning". Examples of these are given.

This work was originally written as a PhD thesis at University of Southampton. It is inspired by The Butterfly Effect Theories to investigate lingua franca phenomena as complex adaptive systems within other complex adaptive systems. It focuses on English as a lingua franca and highlights Arabic as a lingua franca as well. This study's large-scale surveys and interviews are aimed to explore users' (in)tolerance towards misalignment with standard and native language usages and how their positions relate to their reported language practices, beliefs, attitudes, motives, identity management, ideologies, religions, context, and time. As a butterfly flapping its wings may cause a hurricane, this work shows how any small change in any small part, especially in contextual and temporal dimensions, has the power to set off a string of escalating changes in lingua franca and transcultural interactions.
