This accessible textbook is the only introduction to linguistics in which each chapter is written by an expert who teaches courses on that topic, ensuring balanced and uniformly excellent coverage of the full range of modern linguistics. Assuming no prior knowledge the text offers a clear introduction to the traditional topics of structural linguistics (theories of sound, form, meaning, and language change), and in addition provides full coverage of contextual linguistics, including separate chapters on discourse, dialect variation, language and culture, and the politics of language. There are also up-to-date separate chapters on language and the brain, computational linguistics, writing, child language acquisition, and second-language learning. The breadth of the textbook makes it ideal for introductory courses on language and linguistics offered by departments of English, sociology, anthropology, and communications, as well as by linguistics departments.

New DSM-5 content! Whether it's an entire course on psychiatric nursing or integrating these principles into an existing course, this is the text that's concise, engaging, and informative. It offers an evidence-based, holistic approach to mental health nursing—in a streamlined format that explores nursing diagnoses for both physiological and psychological disorders. It's the psychiatric nursing text that students actually read, understand, and use.

This unique book closes the gap between psychology books and the research that made them possible. Its journey through the “headline history” of psychology presents 40 of the most famous studies in the history of the science, and subsequent follow-up studies that expanded their findings and relevance. Readers are granted a valuable insider's look at the studies that continue to be cited most frequently, stirred up the most controversy when they were published, sparked the most subsequent related research, opened new fields of psychological exploration, and changed most dramatically our knowledge of human behavior. For individuals with an interest in an introduction to psychology.

Rev. ed. of: Foundations of psychiatric mental health nursing / [edited by] Elizabeth M. Varcarolis, Margaret Jordan Halter. 6th ed. c2010. This book presents essential teaching skills and tools for nurse educators. It begins with a discussion of the trends in nursing education and the principles of teaching and learning. The book then explores topics such as classroom teaching, clinical experiences, teaching in the simulation laboratory, and online learning. Each chapter discusses the basics of teaching and learning in the specific environment, followed by scenarios that focus on the issues encountered by nursing faculty in these settings. The scenarios present the key issues under consideration, recommend actions that faculty members can institute to address the issues, and describe rationales and solutions based on best evidence. The book also includes specific tools designed to assist nurse educators in preparation for the teaching role, such as examples of course syllabi, program outcomes, clinical contracts, and action plans. Nurse Educator's Guide to Best Teaching Practice is a valuable resource for novice and experienced educators in managing the challenges inherent in nursing education.

Eleven short stories of the Cuban immigrant experience as characters adjust to life in the United States, from an award-winning author. From the prize-winning title story—a masterpiece of humor and heartbreak—unfolds a collection of tales that illuminate the landscape of an exiled community rich in heritage, memory, and longing for the past. In *Cuba I Was a German Shepherd* is at once “tender and sharp-fanged” as Ana Menéndez evocatively charts the territory from Havana to Coral Gables, Florida, and explores whether any of us are capable, or even truly desirous, of outrunning our origins (LA Weekly). “With the grace of Margaret Atwood and the sensuality of Laura Esquivel,” Menéndez makes an unforgettable debut “rich in metaphor, wisdom, and delicious subtlety” (St. Petersburg Times).

What makes Canada a different kind of society from the United States? In this book-length essay, Philip Resnick argues that, in more ways than one, Canada has been profoundly marked by its European origins. This is most apparent where the European historical underpinnings both of English-speaking and French-speaking Canada are concerned, but it is no less true when one examines Canada's multiple national identities, robust social programs, increasingly secular values and multilateral outlook on international affairs today. As the war in Iraq brought home, and the 2004 federal election reinforced, Canada is a more European-type society than is our neighbour to the south. This does not come without its own complexities or problems. On the contrary, there are significant parallels between the ambiguous versions of national identity that one finds in Canada and what one finds on the European continent. There are parallels, too, between the elements of self-doubt that characterize Canadians overall when they think about their country and those of Europeans caught up in their own, often fractious, attempts to forge a more integrated Europe. The author argues that Canada needs Europe as an effective counter-weight to the influence of the United States. He further argues that, at a deeper existential level, Canadians need relevant European references to better understand what makes them the kind of North Americans that they are.

Promotes ease of understanding with a unique problem-solving method and new clinical application scenarios! With a focus on chemistry and physics content that is directly relevant to the practice of anesthesia, this text delivers—in an engaging, conversational style--the breadth of

scientific information required for the combined chemistry and physics course for nurse anesthesia students. Now in its third edition, the text is updated and reorganized to facilitate a greater ease and depth of understanding. It includes additional clinical application scenarios, detailed, step-by-step solutions to problems, and a Solutions Manual demonstrating a unique method for solving chemistry and physics problems and explaining how to use a calculator. The addition of a third author--a practicing nurse anesthetist--provides additional clinical relevance to the scientific information. Also included is a comprehensive listing of need-to-know equations. The third edition retains the many outstanding learning features from earlier editions, including a special focus on gases, the use of illustrations to demonstrate how scientific concepts relate directly to their clinical application in anesthesia, and end-of-chapter summaries and review questions to facilitate self-assessment. Ten on-line videos enhance teaching and learning, and abundant clinical application scenarios help reinforce scientific principles and relate them to day-to-day anesthesia procedures. This clear, easy-to-read text will help even the most chemistry- and physics-phobic students to master the foundations of these sciences and competently apply them in a variety of clinical situations. New to the Third Edition: The addition of a third co-author--a practicing nurse anesthetist—provides additional clinical relevance Revised and updated to foster ease of understanding Detailed, step-by-step solutions to end-of-chapter problems Solutions Manual providing guidance on general problem-solving, calculator use, and a unique step-by-step problem-solving method Additional clinical application scenarios Comprehensive list of all key equations with explanation of symbols New instructor materials include PowerPoint slides. Updated information on the gas laws Key Features: Written in an engaging, conversational style for ease of understanding Focuses solely on chemistry and physics principles relevant to nurse anesthetists Provides end-of-chapter summaries and review questions Includes abundant illustrations highlighting application of theory to practice

169 Pages / 200+ Illustrations Ever since its inception, the edifice of Evolutionary Darwinism has rested upon a foundation of sand, propped up solely by media hype, public ignorance and extreme intellectual bullying. With the release of 'God vs Darwin: The Logical Supremacy of Intelligent Design Creationism over Evolution', the bullies have met their match in the person of investigative author, M. S. King. In clear, concise and very easy to digest language, 'God vs Darwin' utilizes the basic rules of Socratic reason and logic to inquisitively press upon the multiple weak spots and classic logical fallacies of what King refers to as 'Unscientific Atheism.' Unique, informative, funny, well-researched and packed with illustrations, King's 'idiot-proof' devastation of 'Theoretical Science' will have the Unscientific Atheists scurrying back under the slimy rocks from which they believe our distant grandmothers slithered out from under. Most unique about King's work is the exposure of the bizarre psychological and political factors which served to enthrone Darwin as a false King. Says Patricia L. from Long Island: "King's excellent page-turning treatise makes a monkey out of Darwin and defines the Supreme Intelligence that moves the Universe; as best as we can understand it anyway. 5 HUGE Stars!
