"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research.

This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.

This contemporary overview of the electrical and electronics field strikes an effective balance between basic concepts and current relevant topics while also exploring common areas of application. Early chapters are devoted to the fundamentals of DC circuits, basic transient circuits, and steady-state AC circuits, followed by coverage of linear and digital electronics. Emphasis is then directed toward the electro-mechanical areas of the field including magnetic circuits, three-phase circuits, DC and AC machines, and power transformers. Optional MultiSIM exercises are also included so that many of the same types of experiences that would be obtained in a supporting laboratory can be met with the accompanying software and a PC.

The world of white, from Muji art director Kenya Hara White not only plays an important role in Japanese cultures in general but also in the work of Kenya Hara, art director for Muji. In 100 Whites, Hara gives 100 examples of white, such as snow, Iceland, rice and wax. On the basis of these examples he discusses the importance of white in design--not only as a color but as a philosophy. Hara describes how he experiments with the different whites he instances, what they mean in the process of his work and how they influence design today. 100 Whites is the extension of Hara's previously published book White. The publication explores the essence of white, which Hara sees as symbolizing simplicity and subtlety. Kenya Hara (born 1958) is a Japanese graphic designer, a professor at the Musashino Art University and, since 2002, the art director for Muji. Hara has been awarded many prizes, such as the Japanese Cultural Design Award.
