Since governance and oversight of investment funds are now major regulatory requirements, administrators and custodians must place greater emphasis on the custody and safekeeping of fund assets, on the independent and robust valuation of the assets, and on collateral management. By focusing on both the asset transactions made by the investment manager for the portfolio and on the transactions in the shares or units of the fund itself, it gives readers insights about the essential elements of investment fund management and administration, regardless of their geographical backgrounds.

Explores the key stages in the investment process, from setting up a fund through its launch and operation Explains the roles of participants as well as the ways regulation affects the fund and its operation Describes the work flow associated with custody and administration procedures and processes Defines the role of compliance and risk management in the context of the fund and also how compliance requirements apply to custodians and administrators
