

The Chief Risk Officer A Study Of Roles And Responsibilities

This book analyzes the management of risks in Malaysian multinationals. It examines the factors associated with the level of adoption of emergency risk management., particularly studying the relationship of the Chief Risk Officer and the Board of Directors.

In this book, two experts on the topic raise the question of why many ERM programmes end up as box-checking silos with almost no connection to important decision-making processes, whereas others are empowered and end up having a profound impact on the firm's culture, governance structures, and strategy process. The book establishes a path to empowered ERM by drawing on insights from theory and hard-won lessons from practice. Success factors enabling this transition are thoroughly discussed in a start-to-finish narrative describing the theoretical underpinnings of ERM, its proven best practices, and onto more advanced topic such as risk budgeting and the integration of ERM into strategic decision-making.

This paper tracks the evolution of the role of two chief risk officers (CROs), and the tools and processes they have implemented in their respective organizations. While the companies are from very different industries (one is a power company, the other is a toy manufacturer), they both embraced the concepts and tools of Enterprise Risk Management. Over a number of years, at both firms, risk management transformed from a collection of "off-the-shelf", acquired tools and practices into a seemingly inevitable and tailored control process.

The paper investigates the role of the CRO in making these transformations happen. The two cases highlight that the role of the CRO may be less about the packaging and marketing of risk management ideas to business managers, but instead, the facilitation of the creation and internalization of a specific type of "risk talk" as a legitimate, cross-functional language of business. Thereby the risk-management function may be most successful when it resists conventional and conflicting demands to be either close to, or independent from, business managers. Instead, by acting as a facilitator of risk talk the CRO can enable the real work of risk management to take place not in his own function, but in the business. In both cases, facilitation involved a significant degree of humility on the part of the CRO, manifest in limited formal authority and meagre resources. Their skill was to build an informal network of relationships with executives and business managers, which allowed them to resist being stereotyped as either compliance champions or business partners. Instead they created and shaped the perception of their role which was of their own making: a careful balancing act between keeping one's distance and staying involved.

With the economic crisis that began in 2008, a long-standing trend toward increased regulation is becoming a flood. The clamor for improved

enterprise risk management and the complexity of multinational compliance present executives with a dramatically new array of challenges. Governance should offer solutions, but it is clear that yesterday's governance practices aren't up to the task. In both design and implementation, they are too disconnected and incomplete to fully address our complex compliance and risk management puzzle. Executives get only fragmented views of their true business performance, and inefficiencies drive up costs. The consequences of inadequate governance were demonstrated in the economic meltdown of 2008. As the world struggles to recover from that crisis, business is now faced with a confusing array of evolving regulations, the challenge of managing compliance across multinational organizations and a new imperative for risk management that is coordinated across the enterprise. It's clear that yesterday's governance practices don't meet today's need for centralized controls, integrated compliance and risk management and greater transparency. The need for organizations to change—and change now—is clear. Under Control captures decades of business governance experience from many of the leading authorities at CA, Inc. This book sets out not only to explain the essential challenges of effective business governance, but to help you build solutions for your organization based on lessons learned at CA from its

customers and in its own corporate structure. From governing the organization's policies as a whole instead of in silos, to a department-by-department look at the role and impact of governance, to governing your green initiatives, to the role of the board of directors, to the importance of risk management, this book lays out some of the strategies and processes that may help your organization manage its risk and regulatory requirements. It is clear that the governance standards in the past were inadequate, and that risks have not been properly assessed or understood. This book is a first step in solving this problem so that your organization is prepared and able to respond and thrive in today's rapidly evolving environment. Under Control is the first book published in the new CAPress imprint, a joint publishing program between Apress and CA Inc. "One of the defining factors of the first decade of the 21st century has been the increase of regulation and governance. To explain these trends, and the various best practices for ensuring governance, enterprise IT management solutions provider CA Inc. enlisted more than a dozen subject matter experts from its ranks to contribute content. The resulting book explores the need for broad governance, different areas where governance is important, and various ways for organizations to manage and implement compliance, including IT governance,

project portfolio management, information governance and sustainability management. The book, while largely vendor-neutral, draws on CA's experience creating governance solutions as well as managing its own governance issues.” —Aaron Smith, Projects@Work

Enterprise Risk Management is a set of standardised and widely adopted ideas and designs for how organisations should pay attention to uncertainty. A principal claim of the international discourse around ERM is that it leads to improved enterprise performance through better decision making. In organisations the Chief Risk Officer is formally tasked with implementing ERM, but there is little relevant academic theory to inform this role. There is a dearth of supporting explanatory theory, and lack of insight with respect to translating world-level concepts of ERM into operational systems and processes in organisations. The thesis contributes to filling this gap by exploring ways in which CROs may understand and approach the decision support function of their roles. Empirical grounding was provided by a detailed, longitudinal case study of the

implementation of ERM by the Corporate Risk Manager at Watercare Services Ltd. The case study was significant because of the CRM's principal focus on how ERM could support "better" decision making in the organisation. Theoretical grounding was provided by drawing on literatures from a range of disciplines to interpret and analyse the particulars of the CRM's performance, and to theorise the decision support function of the CRO role. The following question served as the focal lens for the inquiry: How should CROs understand their role with respect to "improving" organisational decision making, and what strategies might they employ toward this goal? The principal claim that the thesis makes is that there are different legitimate ways of conceptualising ERM and thus of interpreting the role of the CRO. Those different ways of "seeing" imply different possibilities for acting, which may be more or less effective with respect to improving decision making quality. The thesis argues that, of the identified perspectives, one is more likely to be workable as a basis for productive intervention by CROs than the others. Methodologically the thesis employs transdisciplinary modes of knowledge production. This is reflected in the wide range of literatures with which the thesis engages, the collaborative Dialogues between researcher and practitioner where we reflected on the complex problematics and uncertainties encountered, and the hermeneutic

approach to the analysis, characterised by constant questioning and re-articulation of preconceptions through dialogical confrontation. Although far from typical of engineering research, the thesis illustrates and contributes methodologically to the current debate about the appropriate scope of education for engineers in the 21st Century.

The need for assurance is never more acute than in times of turbulence and uncertainty. The events following the financial market crisis demonstrate the catastrophic consequence of risk taking that exceeds the board's appetite, and of not joining up risk intelligence for sound decision making. Boards and senior management alike consistently seek the 'one truth' about risk exposures and strength of controls but are continuing to grapple with the challenge. Much has been written about assurance and the governance of risks, but mainly by those who provide it - such as internal auditors, accountants and information security technologists - for the purpose of advancing their professional practices. Less is written for or by those in governance who need assurance for the effective discharge of their responsibilities. Regulations do not usually go beyond acknowledging its importance and rely on those in the boardroom to get it right. Studies have consistently shown the link between weak corporate governance and corporate failures. The lack of reliable assurance has often been a factor. Assurance, as an integral part of corporate governance, cannot be taken for granted. It requires conscious action across the organisation. It is time to rethink assurance beyond its usual functional boundaries, to focus on what matters to the business and how discussions in the board room can be better

Organizational encounters with risk range from errors and anomalies to outright disasters. In a world of increasing interdependence and technological sophistication, the problem of understanding and managing such risks has grown ever more complex. Organizations and their participants must often reform and reorganise themselves in response to major events and crises, dealing with the paradox of managing the potentially unmanageable.

Organizational responses are influenced by many factors, such as the representational capacity of information systems and concerns with legal liability. In this collection, leading experts on risk management from a variety of disciplines address these complex features of organizational encounters with risk. They raise critical questions about how risk can be understood and conceived by organizations, and whether it can be 'managed' in any realistic sense at all. This book is an important reminder that the organisational management of risk involves much more than the cool application of statistical method.
