Winner of an AJN Book of the Year Award for 2009! "[This] book offers a coherent, theoretical, and research-guided framework for quality nursing caring in practice, education, and leadership; a foundational, timeless, yet transformative framework of substance." Jean Watson, PhD, RN, AHN-BC, FAAN College of Nursing, University of Colorado, Denver Dedicated time spent with patients and families in clinical settings is often limited, rushed, and impersonal. How can nurses develop more positive, caring relationships with their patients, and help to improve the quality of patient care at large? This book addresses this critical question by presenting Joanne R. Duffy's Quality-Caring Model©-the result of 35 years of clinical experience and educational acumen. This values-based model will bring caring back into the foreground of nursing practice by providing revised curricula for educational programs, and outlining the core caring principles for nurse administrators. Key Features: Establishes "Relationship-Centered Caring," with discussions on how to care for the self, patients and families, each other, and communities Offers multiple case examples, and includes reflective questions and applications for use in educational programs, workshops, conferences, and clinical practice Demonstrates how the Quality-Caring Model© can be implemented in clinical practice, nursing education, research, and nursing leadership settings Includes appendices that discuss how caring can improve patient safety, outline course objectives, and explain how to assess and measure caring in your facility Written in clear, accessible language, this book will be an invaluable resource to nursing students, nursing scholars, clinical nurses, nurse educators, nurse researchers, and nurse leaders. Duffy's approach will help create a redesigned patient care delivery system focused on the primacy of caring relationships.

Madeleine Leininger's theory of culture care is a powerful yet practical philosophy which focuses on generating knowledge related to the care of people from different cultures. The authors illustrate this important theory and show the different cultural factors that influence illness, wellness, and ways clients maintain their wellness--or become ill. Leininger's model is unique in that it suggests that the nurse assess the patient's need and determine intervention according to their culture and lifeways. Beginning with an overview of the theory and its origins, this

book presents the assumptions underlying the theory; the major concepts of the meta-paradigm of nursing, including the nursing process; propositions of the conceptual model; examples for application to practice and research; and a bibliography, including classic works, critiques, and research. Madeleine Leininger is essential reading for nursing students and advanced students and nurses who desire a quick overview. "...deals with a comprehensive range of issues, processes, theories, research and practices aimed at the development of services that are culturally appropriate, acceptable and relevant to the culturally diverse societies of the twenty-first century. The public expects the care they receive from health and social care practitioners to be sensitive to their cultural beliefs and values, appropriate to their needs, and free from discrimination."--Publisher.

Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice, but it is not always easy for the student to make a real connection between the two. Drawing on many years' experience of teaching and research, Hugh McKenna addresses the theory needs of both students and qualified staff. He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and analysis. This text offers step-by-step guidelines on: \* how to analyse concepts \* how to generate and select theory \* how to apply and test theory in practice. Written in a friendly, easy to read style, Nursing Theories and Models puts forward realistic strategies for bridging the theory-practice gap.

Access the essential information you need to understand and apply theory in practice, research, education, and administration/management. The most concise and contemporary nursing theory resource available, Theoretical Basis for Nursing, 5th Edition, clarifies the application of theory and helps you become a more confident, well-rounded nurse. This acclaimed text is extensively researched and easy to read, giving you an engaging, approachable guide to developing, analyzing, and evaluating theory in your nursing career.

\*\*\* Awarded First Place in the 2015 AJN Book of the Year Award in two categories - "History and Public Policy" and "Professional Issues" \*\*\* This anthology presents the philosophical and practice perspectives of nurse scholars whose works center on promoting nursing research, practice, and education within frameworks of social justice and critical theories. Social justice nursing is defined by the editors as nursing practice that is emancipatory and rests on the principle of praxis which is practice aimed at attaining social justice goals and outcomes that improve health experiences and conditions of individuals, their communities, and society. There is a lack in the nursing discipline of resources that contain praxis approaches and there is a need for new concepts, models, and theories that could encompass scholarship and practice aimed at purposive reformation of nursing, other health professions, and health care systems. Chapters bridge critical theoretical frameworks and nursing science in ways that are understandable and useful for practicing nurses and other health professionals in clinical settings, in academia, and in research. In this book, nurses' ideas and knowledge development efforts are not limited to problems and solutions emerging from the dominant discourse or traditions. The authors offer innovative ways to work towards establishing alternative forms of knowledge, capable of capturing both the roots and complexity of contemporary problems as distributed across a diversity of people and communities. It fills a significant gap in the literature and makes an exceptional contribution as a collection of new

Out of necessity nursing, as a profession, reflects the qualities of the culture in which it exists. In our culture for the past quarter of a century nursing has been assailed with rapid economic, technological, shortage- abundance, changing scenes' vicissitudes. In the individual nurse these arouse turmoil and uncertainty. These cultural stirrings inflame that part of the nurse's spirit capable of chaotic conflict and doubt. Often she questions her professional identity. "Just what is a nurse?" Her nurse colleagues, other professionals, and nonprofessionals freely, directly and indirectly-on television, in the theater, through the news media and the literature-pummel her with their multitudinous varied views.

This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice. The narrative method captures content and contextual issues that are often missed by formal models of nursing knowledge. KEY TOPICS: The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. MARKET: For nurses and healthcare professionals.

This book presents Campinha-Bacote's model of cultural competence for the delivery of culturally responsive healthcare services. Specifically, it describes the model's constructs of cultural awareness, cultural knowledge, cultural skill, cultural encounters & cultural desire. It also presents an instrument, based on this model, to measure the level of cultural competence among healthcare professionals.

The 3rd Edition of this AJN Book-of-the-Year Award-Winner helps you answer those questions with a unique approach to the scientific basis of nursing knowledge. Using conceptual models, grand theories, and middle-range theories as guidelines you will learn about the current state and future of nurse educators, nurse researchers, nurse administrators, and practicing nurses. This is the first book of its kind linking theory (both middle-range and grand theories from nursing and other disciplines) to research using a systematic format to evaluate the theory's applicability in research that focuses on a range of clinical populations and care delivery systems.

Jean Watson's first edition of Nursing, now considered a classic, introduced the science of human caring and quickly became one of the most widely used and respected sources of conceptual models for nursing. This completely new edition offers a contemporary update and the most current perspectives on the evolution of the original philosophy and science of caring from the field's founding scholar. A core concept for nurses and the professional and non-professional people they interact with, "care" is one of the field's least understood terms, enshrouded in conflicting expectations and meanings. Although its usages vary among cultures, caring is universal and timeless at the human level, transcending societies, religions, belief systems, and geographic boundaries, moving from Self to Other to community and beyond, affecting all of life. This new edition reflects on the universal effects of caring and connects caring with love as the primordial moral basis both for the philosophy and science of caring practices and for healing itself. It introduces Caritas Processes, offers centering and mediation exercises on an included audio CD, and provides other energetic and reflective models to assist students and practitioners in cultivating a new level of Caritas Nursing in their work and world.
