The series builds an extensive collection of high quality descriptions of languages around the world. Each volume offers a comprehensive grammatical description of a single language together with fully analyzed sample texts and, if appropriate, a word list and other relevant information which is available on the language in question. There are no restrictions as to language family or area, and although special attention is paid to hitherto undescribed languages, new and valuable treatments of better known languages are also included. No theoretical model is imposed on the authors; the only criterion is a high standard of scientific quality.

A leading geneticist explores what promises to be one of the most transformative advances in health and medicine in history Almost every week, another exciting headline appears about new advances in the field of genetics. Genetic testing is experiencing the kind of exponential growth once seen with the birth of the Internet, while the plummeting cost of DNA sequencing makes it increasingly accessible for individuals and families. Steven Lipkin and Jon Luoma posit that today's genomics is like the last century's nuclear physics: a powerful tool for good if used correctly, but potentially dangerous nonetheless. DNA testing is likely the most exciting advance in a long time for treating serious disease, but sequencing errors, complex biology, and problems properly interpreting genetic data can also cause life-threatening

misdiagnoses of patients with debilitating and fatal genetic diseases. DNA testing can also lead to unnecessary procedures and significantly higher health-care costs. And just around the corner is the ability to cure genetic diseases using powerful gene-editing technologies that are already being used in human embryo research. Welcome to the Age of Genomes! The Age of Genomes immerses readers in true stories of patients on the frontier of genomic medicine and explores both the transformative potential and risks of genetic technology. It will inform anxious parents increasingly bombarded by offers of costly new prenatal testing products, and demonstrate how genetic technology, when deployed properly, can significantly improve the lives of patients who have devastating neurological diseases, cancer, and other maladies. Dr. Lipkin explains the science in depth, but in terms a layperson can follow.

As technologies for electronic texts develop into ever more sophisticated engines for capturing different kinds of information, radical changes are underway in the way we write, transmit and read texts. In this thought-provoking work, Peter Shillingsburg considers the potentials and pitfalls, the enhancements and distortions, the achievements and inadequacies of electronic editions of literary texts. In tracing historical changes in the processes of composition, revision, production, distribution and reception, Shillingsburg reveals what is involved in the task of transferring texts from print to electronic media. He explores the potentials, some yet untapped, for electronic representations of printed works in ways that will make the electronic

representation both more accurate and more rich than was ever possible with printed forms. However, he also keeps in mind the possible loss of the book as a material object and the negative consequences of technology.

Win Liberte has it all. He prides himself on never having worked a day in his life. He has everything he wants - fast cars, beautiful women, a racing yacht, a penthouse in Manhattan. Orphaned at eleven, Win inherited an international diamond business that is managed by his uncle. Then Win loses it all when his uncle commits suicide after investing all of Win's money in a scheme that fails. His single remaining asset is a bankrupt diamond mine in Angola, a steaming, war-ravaged country in equatorial Africa. In the blood and muck of central Africa, Win experiences the "Diamond Curse" first hand. Battles over Angola's vast wealth in gems occur daily, and fights for control of the diamond industry have wiped out generations. Thriving on the challenge, Win founds an international diamond business that challenges a powerful cartel's stranglehold on the market. Loved by two women - a movie goddess who sears men's souls and a dedicated UN worker who risks her life in Africa - Win doesn't find anything worth living for until he loses love. From the tunnels of the diamond mine to the stage at the Academy Awards, from the beds of beautiful women to a battle with warlords, Win has to fight to get back everything he ever wanted. Tahir Shah's *The Caliph's House*, describing his first year in Casablanca, was hailed by critics and compared to such travel classics as *A Year in Provence* and *Under the Tuscan Sun*. Now Shah takes us deeper into the heart of this exotic and magical land to uncover mysteries that have been hidden from Western eyes for centuries.... In this entertaining and penetrating book, Tahir sets out on a bold new journey across Morocco that becomes an adventure worthy of the mythical *Arabian Nights*. As he wends his way through the labyrinthine medinas of Fez and Marrakesh, traverses the Sahara sands, and tastes the hospitality of ordinary Moroccans, Tahir collects a dazzling treasury of traditional stories, gleaned from the heritage of *A Thousand and One Nights*. The tales, recounted by a vivid cast of characters, reveal fragments of wisdom and an oriental way of thinking that is both enthralling and fresh. A link in the chain of scholars and teachers who have passed these stories down for centuries like a baton in a relay race, Shah reaches layers of culture that most visitors hardly realize exist, and eventually discovers the story living in his own heart. Along the way he describes the colors, characters, and the passion of Morocco, and comes to understand why it is such an enchanting land. From master masons who labor only at night to Sufi wise men who write for soap operas, and Tuareg guides afflicted by reality TV, *In Arabian Nights* takes us on an unforgettable journey, shining a light on facets of a society that are normally left in darkness.

#1 New York Times Bestseller “THIS. This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In *Think Again*, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I’ve never felt so hopeful about what I don’t know.” —Brené Brown, Ph.D., #1 New York Times bestselling author of *Dare to Lead* The bestselling author of *Give and Take* and *Originals* examines the critical art of rethinking: learning to question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn. In our daily lives,

too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be gravitating toward those who challenge our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval--and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become. Organizational psychologist Adam Grant is an expert on opening other people's minds--and our own. As Wharton's top-rated professor and the bestselling author of *Originals* and *Give and Take*, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned

parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. Think Again reveals that we don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

Because of his political views, Kazys Boruta spent years in prison both before and after WWII. In the last phase of his life in Soviet Lithuania, he earned a living by translations published under a pseudonym. Most of Whitehorn's Windmill (Baltaragio mal?nas) was written in 1942, during the German occupation. Bearing a lyrical style that gives full rein to the oral folktale tradition Lithuania is famous for, the novel is by turns romantic, farcical, fantastic, and tragic. The sense of spirituality that permeates the work reflects Lithuania's pagan roots that were overlaid with an occasionally over-zealous Catholicism not so very long ago. The story is about Whitehorn the miller's efforts to find a match for his beautiful daughter, Jurga, against various calamities with and among suitors, neighbors, priests and other inhabitants of the village, and ultimately against the devil's spell. The interesting plot made the novel popular as juvenile literature, too. This book presents recent developments on the health and safety of fermented

meat products. It discusses health aspects of select topics in fermented meat microbiology, veterinary public health, chemistry, technology, biotechnology, nutrition, toxicology, and quality assurance, and gives a broad insight into the product's safety and health hazards. The book considers the safety of fermented meat products through a whole food chain approach. It focuses on requirements for strict hygienic and technological procedures to prevent potential risk during the production of ready-to-eat products. The book does not aim to serve as negative publicity for meat products. Just the opposite – it points out to the complexity of prevention and control of potential hazards/risks in the production which greatly contributes to a higher total value of fermented meat products. This reference book is a result of collaborative efforts of a number of distinguished authors with international reputation from renowned institutions and it is intended to both academic and professional audience.

The modern world is built on commodities - from the oil that fuels our cars to the metals that power our smartphones. We rarely stop to consider where they have come from. But we should. In *The World for Sale*, two leading journalists lift the lid on one of the least scrutinised corners of the world economy: the workings of the billionaire commodity traders who buy, hoard and sell the earth's resources. It is the story of how a handful of swashbuckling

businessmen became indispensable cogs in global markets: enabling an enormous expansion in international trade, and connecting resource-rich countries - no matter how corrupt or war-torn - with the world's financial centres. And it is the story of how some traders acquired untold political power, right under the noses of western regulators and politicians - helping Saddam Hussein to sell his oil, fuelling the Libyan rebel army during the Arab Spring, and funnelling cash to Vladimir Putin's Kremlin in spite of western sanctions. The result is an eye-opening tour through the wildest frontiers of the global economy, as well as a revelatory guide to how capitalism really works.

Work is constantly reshaped by technological progress. New ways of production are adopted, markets expand, and societies evolve. But some changes provoke more attention than others, in part due to the vast uncertainty involved in making predictions about the future. The 2019 World Development Report will study how the nature of work is changing as a result of advances in technology today. Technological progress disrupts existing systems. A new social contract is needed to smooth the transition and guard against rising inequality. Significant investments in human capital throughout a person's lifecycle are vital to this effort. If workers are to stay competitive against machines they need to train or retool existing skills. A social

protection system that includes a minimum basic level of protection for workers and citizens can complement new forms of employment. Improved private sector policies to encourage startup activity and competition can help countries compete in the digital age. Governments also need to ensure that firms pay their fair share of taxes, in part to fund this new social contract. The 2019 World Development Report presents an analysis of these issues based upon the available evidence.

James Achilles Kirkpatrick landed on the shores of eighteenth-century India as an ambitious soldier of the East India Company. Although eager to make his name in the subjection of a nation, it was he who was conquered—not by an army but by a Muslim Indian princess. Kirkpatrick was the British Resident at the court of the Nizam of Hyderabad when in 1798 he glimpsed Khair un-Nissa—'Most Excellent among Women'—the great-niece of the Nizam's Prime Minister. He fell in love with Khair, and overcame many obstacles to marry her—not least of which was the fact that she was

locked away in purdah and engaged to a local nobleman. Eventually, while remaining Resident, Kirkpatrick converted to Islam, and according to Indian sources even became a double-agent working for the Hyderabadis against the East India Company. Possessing all the sweep of a great nineteenth-century novel, *White Mughals* is a remarkable tale of harem politics, secret assignations, court intrigue, religious disputes and espionage.
